

The meeting discussed various website improvements, including fixing email functionality, connecting the tagging system to a database, completing the PHP for page editing, and enhancing a form with more options and a favorites feature. Contact pages can send email locally but not to an actual email account. Tagging system displays tags and allows selection, and needs to be connected via database. PHP for editing pages in progress, should be done by Sunday. From being improved with more options, working on favorite features. Nayib should fix the navigation bar
